Linedata Protect Cybersecurity Solution
Protect your business with our advanced cybersecurity offering

Cyberthreats are ubiquitous to modern business. Cybercriminals have leveraged digitalization, hybrid working, and geopolitics to pose financial, reputational, and even existential threats. Regulators including the SEC and FTC have sharpened compliance requirements in response. Yet many asset managers lack the necessary in-house expertise to mitigate evolving threats, much less the budget and bandwidth for the platforms and tools to provide true cybersecurity protection.

If you're concerned about cybersecurity, we can help. As a technology services provider to the asset management industry for over 20 years, we've tailored our fully integrated threat management solution to the security, compliance, and operational requirements of hedge funds, private equity, family offices, and other asset managers. Our consumption-based cybersecurity solutions evolve with the threat landscape and include threat mitigation as standard.

The cybersecurity protection you need at a price you can afford

Our Endpoint Detection, Response, and Remediation (EDRR) offering protects endpoints and devices with AI-based threat detection, plus remediation by our Security Operations Center (SOC). Our Managed Detection, Response, and Remediation (MDRR) offering expands that coverage across your network and applications. Our Network Operations Center (NOC) will keep your systems running securely while reducing your IT overhead so you can focus on core business activities.

Choose the right Linedata Protect package for your needs

Security Features	EDRR Package	MDRR Package
Endpoint Detection and Response (EDR)	🔒	🔒
Behavior-based next-generation antivirus	🔒	🔒
24/7/365 Security Operations Center (SOC)	🔒	🔒
